Introducing the 360 COLLECTION, powered by LED technology, offering unparalleled possibilities for illuminating spaces previously out of reach. With its versatile applications indoors and outdoors, unaffected by the Sun's ultraviolet rays, its potential uses are endless. What sets the 360 COLLECTION apart from other market technologies are its exceptional features:

- Four tubes/profiles of varying diameters crafted from Lupolen 2426H (polyethylene) 360-degree shadow-free lighting in two profiles.
- Customizable curves to fit any design requirement.
- Multiple color options.
- A wide range of forms and shapes.
- The ability to create luminaires that match each designer's imagination.

These outstanding qualities make the 360 COLLECTION the epitome of versatility, flexibility, and originality. It enables the creation of diverse projects, offering solutions that cater to the needs of customers in various spaces such as homes, stores, offices, hotels, shopping centers, cinemas, businesses, and buildings. Just imagine!

Our latest advancement in the 360 COLLECTION introduces a series of semi-standardized pieces that allows designers to configure their unique designs. By combining standard straight and curved elements, designers can create original and versatile compositions using either polyethylene or metallic parts that adapt seamlessly to different diameters. This evolution opens new possibilities for creative expression and customization, elevating the 360 COLLECTION to even greater heights.
