We reinvent the starry skies. For years, technologies have been used that made it quite difficult and expensive to install a Starry Sky. With the CAELUM ASTRICUS system we get:

Special electric ceiling

Special electric wall

Light points

Once the ceiling or wall are installed, you can create your starry sky as you wish, whenever you want, and you can design, modify, and "install" it without the need for an installer. Likewise, it allows incorporating most of the range of embedded and surface lighting fixtures from GOOD NIGHT Lighting Special Products into the CAELUM ASTRICUS CEILING itself.

This system allows you to create and design advertising signs, billboards, etc., and it is easily modifiable by the end customer.

With CAELUM ASTRICUS, a window to the Sky (starry) opens.
