

# FLEXIBILIS

*Posted on August 1, 2024 by admin*

425

With the arrival of the FLEXIBILIS model, we welcome a new solution that allows us to make a circumference and cast the light either from its interior or its exterior, with aluminum profiles. With FLEXIBILIS, there will be no more need to use the loose led strip, which didn't contribute any safety or quality, and which ended up breaking down before long. No more need either to apply weird inventions that end up being more expensive than the led proper. With the FLEXIBILIS model, which bends easily to adapt to construction, these old problems are over.
