451

MITIS is a recessed system that achieves the softness and the visual comfort that we are rarely able to get with the usual models in the market. Its soft light, which can be warm or cool depending on our mood, gives us high quality light and at the same time, aesthetics that allow us to play around with interior design. With its different power settings plus its double light system, we can achieve effects that are both highly visual and able to give us the peace-and-quiet feeling that we so often look for.
